

eLEAF is an information services supplier for the agriculture, water management and insurance sectors. Our information services are primarily derived from Earth Observation data that we process with our PiMapping® technology based on advanced Surface Energy Balance algorithms.

We offer a wide variety of solutions to our customers with which we have a leading position in the world. We work closely with partners and clients that are at the forefront of new developments to improve water use efficiency and drive the transition to sustainable agriculture.

For our Operations Unit we are looking for an experienced

Geo-ICT Process Manager

As Geo-ICT Process Manager you will lead our Operations Unit. This unit is the data factory of eLEAF, responsible for operational data processing and the delivery of information services to our clients. It includes the entire chain from input data collection to quality control of our services.

Your daily activities consist of managing the Operations team, comprising of 9 experts in the field of Earth Observation, data processing and ICT. Your prime responsibility is to ensure quality of service from an operational perspective, e.g. proper execution of algorithms and procedures, timely delivery and reproducibility.

To support our ambition to scale up our services, you will lead the development of our processing and spatial data infrastructure, with a focus on standardisation and automation. For this, you will cooperate intensively with our Markets and Research units to align our operational capabilities with our commercial ambitions and expand this capability further through our research activities. Monitoring our operational performance is part of the job, which you will regularly report to the Managing Director.

You are an experienced Geo-ICT Manager with a good understanding of the latest development in Spatial Data Infrastructure and data process management. You have a background in Earth Observation, GIS, Data or Computer Science. With at least 10 years of relevant working experience, of which 5 years managing a team of highly educated specialists, you understand the challenges of developing high performance IT infrastructure for large volume information service delivery. You like complex challenges and are able to keep overview and set priorities. You have good management and communication skills. Fluency in English is prerequisite and fluency in Dutch is strongly preferred.

This position offers plenty of interesting challenges and opportunity for professional development. You will be working in an inspiring work place with motivated colleagues who like to make an impact on sustainable water use and the improvement of agricultural production. We offer good primary and secondary benefits. Our office is located in Wageningen and you will need to be eligible to work in the Netherlands.
